

Your approximate assisted suicide statistics annually (at 2016):

Oz 26m x 0.6% = 156,000 (death rate = that actually succeed in avoiding further torture by you and your friends = 15,600)

US 333M x 0.6% = 199,800

UK 68M x 0.6% = 68 = 40,800

Canada 35M x 0.6% = 21,000

New Zealand = 15M x 0.6% = 9,000

Total English Speaking population = 477 000 000

The incidence of schizophrenia is = 426,200

Prevalence = 20,511,000

Assisted suicide = 10% that are DEAD, that you murder (each year) = 42,660

(4 - 6 people in shifts torturing every schizophrenic = upwards 82,044,000 torturers = 17% of population).

3% of population are psychopaths = 14,310,000

Therefore, 2,461,320 (aspirational) 'Freemasons' are psychopaths.

So death rate annually = (15,600 + 19,980 + 4,080 + 2,100 + 900) = 1,990,400

so # people you murder per year = 42,660 --> Divided by 365 = 116 per day each 16 hours = 7 --> per hour; over 5 countries = 2 per country per hour

20,511,000 schizophrenics x \$20 every second fortnight (x12) robbery \$4,922,640,000 revenue from robbing schizophrenics.

Your anecdotal approximate assisted suicide statistics annually (at 2008):

Oz 25m x 1% = 250 000 x 10% that actually succeed in avoiding further torture by you and your friends = 25000

US 290M x 1% = 2 900 000 x 10% = 290,000

UK 68M x 1% = 68 = 680 000 x 10% = 68,000

Canada 35M x 1% = 350 000 x 10% = 35,000

New Zealand = 15 m x 1% = 150 000 x 1000000% = 15,000

Total English Speaking population = 433 000 000

Total Schizophrenia = 380–552 (median = 466) per (433,000,000 / 100 000 of pop) = 2,017,780, or another site said 1 991 800.

Schizophrenia incidence: = 1% of English population = 4 330 000 =+ 10% death by (assisted) suicide = 433,000

(4 people torturing every schizophrenic = 1,732,000 torturers / 6 people torturing every schizophrenic = 2,598,000 torturers)

3% of population are psychopaths = 12 990 000

So 25000 + 290000 + 68000 + 35000 + 15000 people you murder per year = 433,000

433,000 / 365 = 1,186 per day / = 49 people you murder per hour in the English speaking world.

4 330 000 schizophrenics x \$20 every second fortnight (x12) = \$1,039,200,000 annual revenue from robbing schizophrenics: (divided by 2 598 000 Freemasons = \$400.00 annually per Freemason)

The life span of individuals with schizophrenia can be up to 20 years shorter than the general population, and the risk of death is raised by two- to threefold. The life span of individuals with schizophrenia can be up to 20 years shorter than the general population, and the risk of death is raised by two- to threefold.

The total suicide rate per 100 000 person-years was 74.00, which is 4.5 times higher than that for the general US population. Observed a 2.9-fold increased all-cause mortality in patients with schizophrenia versus the general population. Identified significantly greater specific-cause mortality among individuals with schizophrenia versus the general population, which was particularly pronounced for suicide (9.7-fold); We found that first-episode schizophrenia was associated with a 7.4-fold higher all-cause mortality risk versus the general population.

The mortality rate within 10 years was found to be 10.6%, with a mean age of 53.1 years at the time of death.

10-13% of individuals with schizophrenia kill themselves. Research at least 5–13% of schizophrenic die suicide.

Your approximate assisted suicide statistics annually (at 2022):

Schizophrenia now affects between 0.28% and 0.6% of the global population, with prevalence of 4.3% (<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6192504/>).

In Oz, <https://www.betterhealth.vic.gov.au/health/conditionsandtreatments/schizophrenia> point prevalence is between 150,000 and 200,000 Australians (0.67%).
